

**The first leg in force projection.
We deploy the force,
anytime, anywhere!!!!**

**Lt. Col. John Hall
Chief
(757)878-7518**

**Marvin Tobe
Plans/West Team
(757) 878-8560**

**Lori Starke
Daily Ops/East Team
(757)878-8562**

**After normal duties hours, you can contact the DSC
Command Operation Center at (757)878-8141.**

Deployment Support Command

Command Operations Center

**Providing quality
service to the
nation's warfighters
at home and abroad**

The Command Operations Center (COC) is the heart of the Military Traffic Management Command Deployment Support Command operations.

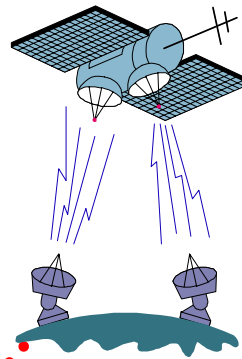

As a subordinate element of the United States Transportation

open >>

Command, the mission of the COC is to provide synchronized transportation planning support for strategic mobility, contingency and deployment plans, and for other operations including humanitarian relief efforts and sustainment of theater logistics for the entire Department of Defense, including the Joint Chiefs of Staff, and other federal agencies.

The COC is involved in all aspects of DSC's mission from the moment DoD cargo is identified for movement until it reaches its final destination. The COC also monitors the Army's prepositioning program and coordinates with the Military Sealift Command on ship movements. In short, DSC is the global transportation manager and the Command Operations Center is where all the elements of DSC's vast mission converge.

The Command Operations Center

operates 24 hours a day, 7 days a week, to support the warfighter by executing command and control of port operations involving all modes of military and commercial surface transportation on a daily basis during wartime, contingencies and humanitarian operations. The COC's areas of responsibility include the Continental United States, Alaska, Central and South America, and the Caribbean.

In managing these vast and complex operations, various automated tools are employed such as the Global Command and Control System (GCCS), Joint Operation Planning and Execution System (JOPEX) and the Global Transportation Network (GTN). Other systems used are the Integrated Booking System (IBS), NETREDI (Rail Tracking System) and the Worldwide Port System (WPS). These systems enable the COC to provide a continuous flow of vital, time sensitive movement information between MTMC headquarters, USTRANSCOM, Major Commands, and strategic sealift ports.

Together, the COC's group

of highly skilled, professional staff of civilians, active duty and Reserve military personnel, is able to identify, track and resolve a myriad of issues associated with deploying and redeploying cargo and personnel.

If DOD cargo is moving anywhere in the world, the COC knows about it!
